STEERING WHEEL DISPLAY UPDATE

REQUIRED UPDATE, TO BE IMPLEMENTED AT INDY

An update to the steering wheel display has been tested and finalized, ready to introduce at Indy.

The update adds the ability to send alarm events and acknowledgements to the ECU. These events are added to the logging list in the latest update (ECU update to be implemented by HPD also at INDY).

Alarm re-trigger events have also been updated.

Please tag your steering wheel with Team and Car#, and bring to ONROAK transporter as soon as possible on Thursday.

Customers not attending Indy please contact Onroak Automotive North America to organize reprogramming.
