

now hear this.

## Release Notes for Controller SW upgrade 1.59

Features added since SW version 1.56

- added 1080p/24Hz format to HDMI software
- added Xd speaker submenu for Xd product family (Xd and M-80)
- added Absolute Center speaker

-----  
NEEDS TO BE USED WITH CURRENT DSP SOFTWARE VERSION 50.36

To determine what software and DSP version is running on your Controller:

- push Controller front panel **Standby** touch-switch briefly to put unit into standby
- push and hold Controller front panel **Standby** touch-switch for 4 seconds
- the first screen shown will indicate the SW version and release date
- the second screen shows the DSP version
- subsequent screens will display versions about other Controller features
